

Dear [Parent]:

In the next few days, your child will be taking the MindPrint online assessment. MindPrint measures learning skills like complex reasoning, memory, and attention. These skills have been shown by research to be highly correlated to academic and social and emotional skills, including self-awareness and self-management. MindPrint will take your child approximately one hour to complete. It consists of a series of computer tasks that feel like games and puzzles.

The results are used to understand how your child learns best. Unlike academic achievement tests that measure what skills your child has mastered, MindPrint evaluates how your child best absorbs, understands and problem solves with different types of information and formats. MindPrint will be used to help us individualize instruction and strengthen study skills in the way that will be most effective for your child.

We also will be using MindPrint to help students develop self-awareness of their unique learning strengths, set personalized goals and to cultivate growth mindset, so students can take more responsibility for their own learning and success.
